| Math 55 quiz 04/21/2026 |
|-------------------------|

You must type or neatly handwrite each answer on a separate piece of paper and select the pages for each question when you upload to Gradescope. Feel free to use more than one sheet for an answer if needed. Note that both PDF and picture/photo format (JPG) are accepted. You must show your work. During the quiz, you may consult the textbook, your own notes and other course materials you yourself prepared before the beginning of the quiz. You may not consult resources online. You can post a private question to Ed Discussion to instructors only, but do not make public posts on Ed Discussion, Discord, or other online forums.

By submitting this quiz, you agree to adhere to the statement below: “As a member of the UC Berkeley community, I act with honesty, integrity, and respect for others. All of the work submitted here is mine, and I have not discussed the content of this exam with any other person. I have not consulted any resources beyond the course materials and my notes during the exam. I have not used calculators, computers, or the internet to do calculations or look up answers.”

1. A group of 30 mathematicians are playing basketball. They have to divide into six teams of five, which they do at random. What is the probability that Willow, Sam, Rebecca, and Daniel, who are four of the mathematicians, will all be on the same team?
2. Fred the Dice Liar likes rolling dice and lying about it. He lies  $\frac{1}{3}$  of the time and tells the truth  $\frac{2}{3}$  of the time. He rolls a fair six-sided die and says that he rolled a 4. What is the probability that he actually rolled a 4? (If he lies, he chooses his lie uniformly at random out of all the numbers he *didn't* roll.)
